

## **AMENDMENTS**

### **In the specification:**

Please amend the paragraph at page 10, lines 1 to 8 as follows:

Referring to FIG. 2 an electronic version 20 of the device is shown. The device 20 comprises a sensor 22. The sensor 22 may be a device such as that sold under the trade-name iButton modified to provide a continued signal and to be indwelling for example by being coated with a biocompatible or non-irritant material, linked to an indicator 24, in the form of an LED, by a conductor 26 also coated with a biocompatible or non-irritant material. A latch **[[28]]** is interposed between sensor 22 and indicator 24 to prevent cancellation of the signal and thereby to ensure the continued illumination of indicator 24.
